AgentAI Chatbot Widget Integration Guide

Overview

This guide provides step-by-step instructions to integrate the AgentAI Chatbot Widget into your business website. The widget enables your customers to interact with an AI-powered assistant instantly. Integration is straightforward and requires adding a single hosted script and initializing it with your company details.

Prerequisites

1. A business website where you can insert custom JavaScript.
2. Your unique company UUID provided by AgentAI.
3. Access to the hosted widget JavaScript file (e.g., https://chat-widget-eight-gold.vercel.app/widget.js).

Step 1: Load the Widget Script

Add the following script tag before the closing </body> tag of your website's HTML:

```
<agent-widget company_uuid="6925cde76bd5de0894c36f39"

            type="customer_agent"

            company_logo = "your-logo-url"

></agent-widget>

<script src="https://chat-widget-xgyz.vercel.app/widget.js"
defer></script>
```

Step 2: Customization Options

You can customize the widget's appearance and behavior using the following parameters:
- apiUrl: Endpoint for your chatbot API.
- company_uuid: Your unique company identifier.
- type: 'customer_agent' or 'business_agent'.
- primaryColor: Primary color for the widget.

```
- secondaryColor: Secondary color for gradients (optional).
- position: 'bottom-right', 'bottom-left', 'top-right', 'top-left'.
```

Step 3: Verify Integration

```
1. Open your website and ensure the chatbot button appears at the
configured position.
2. Click the chatbot button to open the chat window.
3. Type a message to verify that the chatbot responds correctly.
```

Best Practices

```
1. Place the script at the end of your HTML body for faster page load.
2. Use HTTPS for apiUrl to ensure secure communication.
3. Regularly update the widget script URL to the latest hosted version.
```
